

# Our kids fighting climate change by creating sustainable education

## Education vs fuel

Diesel generators not only pump out carbon dioxide they steal education from students in low income schools. Replacing diesel power with solar in remote Pacific island schools creates new education opportunities because the money saved on fuel is spent on education.

For example, Rabi Island School is saving over \$7000 per year that is now spent on books, software and other education resources. That's a big deal considering the average family income is less than \$100 per month. That solar system will also save over 150 tonnes of carbon dioxide.

## A Green Day

A mufti day wearing something green or wear a green ribbon.

Green represents the environment and the fresh new education opportunities our students create. The gold coin gift will keep enhancing other student's lives for a generation.

Creating education opportunities for other kids -- what a great way for our students to take a stand against climate change.

## Our students connected and learning

Your school receives details of the target school (when selected): culture, geography, agriculture, history, system specifications, pictures and a certificate of appreciation (email).

The Pacific schools are assisted to link with schools that helped them. They can communicate about their location, lifestyle, food, weather, outputs from the solar system, fuel saved etc.

Our kids are tomorrow's teachers, politicians, scientists and parents with the world's future in their hands. If these experiences help them learn a little extra, care more and be better environmental stewards that can only be a good thing.

"As a former principal I can only imagine the joy felt by teachers in low income schools when their resources budget increases by 20% plus for the next 20 years. That's what these projects can do. It's also a growth opportunity for our kids."

SEAN GORDON, Life Member of Aust. Primary Principals' Assoc.

"With the money saved on fuel we will buy more text books. Now, for language studies, we share 10 books between 35 students."

ASHMIR RAM Teacher  
Navatu School, Vanu Levu

"We can not express how thankful we are for your kind donation of a solar system. The students teachers and myself have anticipated this for a long time."

ALLAN HEDSTROM  
Principal, Rabi Island School
